To Whom It May Concern:

In 2003, Keith Timmons, of KBT Construction Company was contracted by Jacksonville University to build a new child development center on campus. We moved into the building in the Fall of 2003.

Mr. Timmons constructed a sizable, comfortable and highly appropriate building and playground for young children, ages 2-4 years.

Keith met, not only our rather detailed and numerous requirements, but also all standards dictated by The Florida Department of Children and Families, The Florida Health Department and The Florida Fire Department-all of whom must be satisfied in order for us to obtain our importance licensure.

We are so pleased with our "child friendly" bathrooms, water fountain and counters. Keith included four "one way" windows which enhance opportunities for parent observations.

Another important feature is our Movement Room floor. It is constructed to provide flexibility for growing muscles and bones during movement and music classes.

Keith has been reliable and willing to make any necessary changes. We are so pleased with our building and with Mr. Timmons.

Please feel free to contact me if necessary.
